EXPERIENCE

Backend Developer (May 2022 - present)

Douglo Technologies - Ikorodu Lagos state

- Wrote server-side code to handle the business logic and functionality of web applications and ensured the proper functioning of server-side operations, such as handling user authentication, data processing, file uploads, and database interactions
- Worked with databases to store and retrieve data for web applications, designed and implemented database schemas, created queries to fetch and manipulate data, and optimized the database performance. I was responsible for data security, data validation, and ensuring the integrity and consistency of the data.
- Integrated various systems and third-party services into web applications, and also worked with APIs and web services to connect external services, such as payment gateways, social media platforms, or email services, to the application. I also monitored and maintained the backend infrastructure, ensuring scalability, performance, and security of the application.

Front-end Developer (January 2021 - Present)

- I used HTML, CSS, and React.js to create the user interface of a web application, I structure the layout and design of web pages using HTML markup, define the visual styles and presentation of elements using CSS, and implement interactivity and dynamic behavior using React.js. This involves translating design mockups or wireframes into functional and visually appealing web interfaces.
- Ensure that web applications are responsive and compatible with different devices and browsers. I use media queries, to make the layout and design adapt to different screen sizes and resolutions. I also perform testing and debugging to ensure consistent functionality and appearance across various browsers and platforms. Integrated third-party services and APIs, such as payment gateways and SMS providers.
- With React.js, I can create reusable UI components and build modular, component-based architectures. I develop and maintain React components that encapsulate specific functionalities and can be easily integrated into different parts of the application, thereby promoting code reusability, scalability, and maintainability. Additionally, I use Tailwind CSS, a utility-first CSS framework, to rapidly style and customize components, speeding up the development process.

SKILLS

React.js
Javascript
Mysql
PHP
HTML
CSS
Tailwind

EDUCATION

Landmark University

BSC, Computer Science

omu-aran, Nigeria

LANGUAGES
